

In the Claims:

1. (Currently amended) A display apparatus ~~having~~ comprising:  
a display layer (2) and  
a touch-sensitive layer (3) running parallel thereto,  
~~characterized in that~~ wherein  
that side of the touch-sensitive layer (3) which is remote from the display layer (2)  
has an antireflection lattice (4) comprising lattice elements which can move  
toward one another.
2. (Currently amended) The display apparatus as claimed in claim 1,  
~~characterized in that~~ wherein  
the lattice elements (5) are of strip-like design, the lattice elements (5) being able  
to move toward one another at nodes (13) of the lattice.
3. (Currently amended) The display apparatus as claimed in claim 1,  
~~characterized in that~~ wherein  
the lattice elements (7) are of bristle-like design.
4. (Currently amended) The display apparatus as claimed in claim 1,  
~~characterized in that~~ wherein  
the lattice elements (6) are of stud-like design.

5. (Currently amended) The display apparatus as claimed in claim 1 ~~one of claims 1 to 4~~,

~~characterized in that~~ wherein

the lattice spacing is matched to the pixel spacing on the display layer (2) such that the ratio of the lattice spacing to the pixel spacing is ~~even~~ whole-numbered.

6. (Currently amended) The display apparatus as claimed in claim 1 ~~one of claims 1 to 5~~,

~~characterized in that~~ wherein

the angle (9) between the lattice elements (5, 6, 7) and the touch-sensitive layer (3) is adjustable.

7. (Currently amended) The display apparatus as claimed in claim 6,

~~characterized in that~~ wherein

means ~~are provided~~ for automatically adjusting the angle (9) on the basis of the angle of the incident ambient light (18).

8. (Currently amended) The display apparatus as claimed in claim 1 ~~one of claims 1 to 7~~,

~~characterized in that~~ wherein

the lattice elements (5; 6; 7) are ~~made~~ comprised of a light-absorbent material.

9. (Currently amended) The display apparatus as claimed in claim 1 ~~one of~~  
~~claims 1 to 8,~~

~~characterized in that~~ wherein

the antireflection lattice (4) is removable.

10. (Currently amended) A display apparatus ~~having~~ comprising:

a display layer (2) and

a touch-sensitive layer (3) running parallel thereto,

~~characterized in that~~ wherein

that surface of the touch-sensitive layer (3) which is remote from the display layer  
(2) has a lattice-like surface texturing, the lattice spacing being matched to the  
pixel spacing on the display layer (2) such that the ratio of the lattice spacing to  
the pixel spacing is ~~even~~ whole-numbered.

11. (Currently amended) A display apparatus ~~having~~ comprising:

a display layer (2) and

a touch-sensitive layer (3) running parallel thereto,

~~characterized in that~~ wherein

the touch-sensitive layer (3) contains lattice elements (17), the lattice spacing  
being matched to the pixel spacing on the display layer (2) such that the ratio of  
the lattice spacing to the pixel spacing is ~~even~~ whole-numbered.

12. (Currently amended) The display apparatus as claimed in claim 11,  
~~characterized in that wherein~~  
the lattice elements (17) are made of liquid crystals contained in the touch-  
sensitive layer (3) ~~have liquid crystals.~~

13. (Currently amended) The display apparatus as claimed in claim 11,  
~~characterized in that wherein~~  
the lattice elements (17) are made of an electrochromic material.

14. (Currently amended) The display apparatus as claimed in claim 12 ~~or 13~~,  
~~characterized in that further comprising:~~  
means ~~are provided~~ for automatically adjusting the optical properties of the lattice  
elements (17) on the basis of the ambient light conditions.

15. (Currently amended) A display apparatus ~~having~~ comprising:  
a display layer (2) and  
a touch-sensitive layer (3) running parallel thereto,  
~~characterized in that wherein~~  
the touch-sensitive layer (3) ~~is formed by~~ comprises strip-like lattice elements  
(15) arranged in lattice form, and touch sensors ~~have been~~ integrated into the  
nodes (13) of the lattice.

16.(Currently amended) The display apparatus as claimed in claim 15,  
~~characterized in that~~ wherein

the lattice elements (15) contain electrical conductors (14) which run parallel to the display layer (2) and do not touch at the nodes (13) of the lattice, and the lattice elements (15) are ~~made~~ comprised of an elastic material, ~~with~~ and means ~~being~~ provided for evaluating the spacing of the conductors (14) at nodes (13) of the lattice.

17. (Currently amended) The display apparatus as claimed in claim 15,  
~~characterized in that~~ wherein

the touch sensors are capacitive sensor elements.
